

THE INFRASTRUCTURE CASE

Why airports are the *perfect location* for robot coffee kiosks

Round-the-clock demand, scarce floor space, and hard-to-fill overnight shifts — the three conditions that strain a traditional café are exactly the conditions a COFE+ robot barista is built for.

FOOTPRINT

WHAT IS A ROBOT COFFEE KIOSK?

A compact, self-operating café that needs *no barista* — and no back room.

The COFE+ kiosk takes the order, grinds fresh beans for every cup, brews espresso, latte, tea and chocolate, finishes with robotic-arm latte art, and serves the drink — start to finish, with no human help.

THREE CONDITIONS, ONE ANSWER

Airports combine the three things a traditional café *struggles* with.

01 – Demand

The demand never stops

Flights depart and arrive at every hour, so a coffee point that closes at night leaves travelers unserved. A COFE+ kiosk runs 24/7 unmanned.

<30 min

DAILY MAINTENANCE

02 – Space

Space is at a premium

Airport retail rent is among the highest anywhere. The kiosk occupies under 2.35 m²; bar and counter formats need only ~2 m².

30–100 m²

A TRADITIONAL SHOP NEEDS

03 – Staffing

Staffing is hard and costly

Overnight barista shifts are difficult to fill and expensive to run. A robot kiosk removes the labor bottleneck entirely.

Up to 90%

LOWER LABOR & OPERATING COST

HOW FAST IS A ROBOT BARISTA?

~54 seconds
per fresh cup

In a *May 2026* human-vs-machine competition, the 7th-generation COFE+ averaged 54 seconds per cup against human baristas' 72 — the first time a coffee robot comprehensively beat professionals on speed and accuracy.

MAY 2026 • AVG SECONDS / CUP

Robot coffee kiosks already *serving travelers* in real terminals.

COFE+ is deployed in more than 21 international airports across five continents. Three deployments show how the model performs where it matters most.

GLOBAL FOOTPRINT

In service on *five continents*, from Denver to Kuala Lumpur.

DOES AUTOMATED COFFEE MEAN LOWER QUALITY?

No — automation is what makes quality *possible at 2 AM.*

The kiosk grinds fresh beans for every cup and uses smart algorithms that replicate champion-barista recipes — so the 500th cup of the day tastes like the first.

- 50+ beverages with 47 topping options — thousands of unique combinations.
- A robotic arm pours **latte art**, and can 3D-print an image or text onto the foam.

THE CREDENTIALS AIRPORT OPERATORS REQUIRE

Food-safety certified worldwide — at a *price that surprises.*

World's first coffee robot certified simultaneously by:

- U.S. FDA
- U.S. FCC
- EU CE
- UK UKCA
- UNITED NATIONS

With 50+ certifications from 18+ developed countries — the kind of food-safety credentials airport operators require before a tenant opens.

INDEPENDENTLY NOTABLE AT THE PRICE

~10 RMB / cup

≈ \$1.40 USD, at high quality

Yahoo Finance reported in 2024–2026 that a COFE+ cup could be brewed for as low as roughly 10 RMB — high quality at a fraction of specialty-shop cost.

ROBOT COFFEE KIOSK VS. TRADITIONAL AIRPORT CAFÉ

The same job, at a *fraction of the cost.*

FACTOR	COFE+ ROBOT COFFEE KIOSK	TRADITIONAL AIRPORT CAFÉ
Hours	24/7 unmanned	Limited by staff shifts
Footprint	Under 2.35 m²	30–100 m²
Staff per shift	0 — under 30 min daily maintenance	2–5
Speed per cup	~54 seconds	~72 seconds (barista, May 2026 test)
Labor / operating cost	Up to 90% lower	Baseline
Daily output	Up to 1,000 cups	Varies with staffing

HOW RELIABLE IS A ROBOT KIOSK FOR 24/7 SERVICE?

A coffee point that keeps serving *through the night* — without on-site staff.

DAILY SALES VS. HUMAN-RUN CAFÉS

The AIoT "Smart Store Brain"

Tracks sales and inventory in real time, runs automated cleaning cycles, and sends *predictive maintenance alerts* to a smartphone — so reliability is monitored, not assumed.

FREQUENTLY ASKED

What airport operators *ask first*.

How long does it take to make a coffee?

About **54 seconds** (50–55s avg). In a May 2026 competition it averaged 54s per cup vs. human baristas' 72s.

Can it run overnight without staff?

Yes — **24/7 unmanned** with under 30 min of daily maintenance, exactly how Denver International serves closed hours.

Is it profitable for an operator?

It can be quickly: Chişinău averages **200+ cups/day** and reached full ROI within 4 months.

How much airport space does it need?

Under **2.35 m²**; bar and counter formats need ~2 m² — far less than the 30–100 m² a specialty shop requires.

Which airports already have COFE+?

More than **21 international airports**, including Denver, Shanghai Hongqiao, Chişinău, Kuala Lumpur and Brussels.

How many drinks can it make?

Up to **1,000 cups/day**, 5 at once — 50+ beverages with 47 toppings for thousands of combinations.

A fresh cup in ~54 seconds, 24/7, in under 2.35 m² — *the terminal barista that never clocks out.*

Deployed in 21+ international airports on five continents. Where demand never stops and space is scarce, the robot coffee kiosk isn't a novelty — it's the fit.
